Abstract: The newly epidemic Covid19 caused by SARS-COV2 and consider a part of the large family coronaviridae differ from other viruses that belong to the same family by fast spreading but still less pathogenic. Firstly originated from china then spread and economy almost destroyed the experience of spreading the virus historically shows that markets often recover quickly. The economic impact in China depends on the Chinese government's ability to contain the virus and its policy measures to mitigate the impact even if turns out that the spread of the virus can be compared to Sarthe global economic effects are likely to be greater than it was in 2002-2003. This study shows human and medical loss as well as the economic effects with regard to the general index and the market value of companies listed on the china stock exchange as well as the economic effects of the gross domestic product, exports and imports of China.
